

EvertzAV Set to Display Cutting-Edge AVoIP Solutions at INFOCOMM 2024

Burlington, Canada – June 4, 2024 – EvertzAV (<https://av.evertz.com>), a division of Evertz, the global leader in providing professional A/V over IP solutions, is proud to announce its participation at INFOCOMM 2024 where it will showcase its extensive eco-system of IP routable products and solutions.

Visit EvertzAV at booth C5527 in the Central Hall for comprehensive product demonstrations showcasing our AV distribution solutions. These solutions span Unified Collaboration Integration, advanced Monitoring and Meeting Spaces, Enterprise Broadcast, Corporate Live Production, Digital Signage, Video Walls, Conference Rooms, Courtrooms, Classrooms, Sports Arenas/Stadiums, Live Events, and secure professional KVM Systems.

Solutions showcased at our booth include our Broadcast quality IPMX-Ready Multi-Media Aggregation product line (MMA10G), our NMOS-compliant Orchestration and Control platform called MAGNUM-OS, our COTS Multi-Gigabit easy-to-deploy NUCLEUS platform, our DreamCatcher™ BRAVO Studio, and the world-renowned suite of Studer audio mixing consoles.

MMA10G, a 10Gbps AV over IP distribution, collaboration, and control solution routing over secure, purpose-built Software Defined Networking switch fabrics, is scalable from 16 to over 2048 ports on a single chassis. Running uncompressed, MMA10G gateways deliver no latency, lossless pristine digital video quality, with the optional support of JPEG-XS for UHD (4K60/4:4:4). With support for HDMI, 12G-SDI, bi-directional IP encode and decode and transport redundancy, EvertzAV MMA10G edge devices can meet a wide range of application requirements. Additionally, the newer MMA10G-TRXS-UCPT gateway, which functions as an HDMI transmitter/receiver with USB capture capabilities, and the MMA10G-TRS4K-2A HDMI transceiver gateway with integrated Dante support, further expand the versatility and functionality of our product lineup.

MAGNUM-OS is EvertzAV's complete orchestration, control, and monitoring platform for MMA10G. As an NMOS compliant controller, MAGNUM-OS offers seamless control of both IPMX-Ready MMA10G and other 3rd party devices. MAGNUM-OS provides a single interface that provides secure and resilient ownership of any MMA10G system.

NUCLEUS is a COTS simplified AV over IP distribution, collaboration, and control solution. NUCLEUS is fully interoperable with standard consumer off-the-shelf (COTS) managed switches, securely delivering low latency, high-quality video over 1G, 2.5G or 10G copper or fiber. NUCLEUS operates on a simplified configuration framework allowing administrators the ability to set up a fully functional AV distribution network in minutes. NUCLEUS offers a complete range of modular, standalone and wall plate UXP AV gateways to distribute common AV signals over IP for HDMI, 12G-SDI, and USB-HID/2.0 interfaces.

EvertzAV will be showcasing its Enterprise Broadcast solutions including BRAVO Studio and Studer Audio. Building on over 40 years in the broadcast media industry, EvertzAV is delivering solutions that are high quality and high reliability in broadcast media to the ProAV space. Ideal for corporate and other live event production, BRAVO Studio and Studer Audio bring professional quality production tools, including multi-camera and audio switching/mixing, graphic overlays, ingest, and playout, to production teams to use from anywhere in the world.

About EvertzAV

EvertzAV (<https://av.evertz.com>) is a division of Evertz Microsystems (TSX:ET, <https://www.evertz.com>) exclusively focused on the professional AV marketplace and offering the most complete end-to-end solutions for AV distribution and visualization.
