

FOR IMMEDIATE RELEASE

EvertzAV Showcases Production Tools for Live Event Production at ISE 2026

Burlington, Canada. December 10, 2025: EvertzAV, a division of Evertz Microsystems Ltd., will showcase the latest enhancements to its DreamCatcher™ BRAVO Studio virtual production suite and Studer Audio solutions at Integrated Systems Europe (ISE) 2026, reinforcing its leadership in corporate and enterprise live production.

Today's live events have become key platforms for corporate and enterprise customers to share their message with their key stakeholders. These events require polished visuals and clear, consistent audio quality to keep audiences engaged. For ISE 2026, EvertzAV will showcase how BRAVO Studio and Studer Audio empower corporate teams to produce live events, including product launches, AGMs, town halls and more, delivering the same broadcast quality as large-scale sports productions while remaining cost effective.

DreamCatcher™ BRAVO Studio is the all-in-one, collaborative production platform designed to streamline live event creation. BRAVO Studio enables continuous recording of all sources, content playback, live video/audio switching, replays, graphics insertion and more—within an intuitive interface built for operators of varying experience levels.

New for ISE 2026 are BRAVO Studio's data-driven machine learning (ML) co-pilots and IQs, which assist production staff by automating clip creation, camera selection, playlist management, and story building. These features help teams maximize creativity while also ensuring efficiency, making BRAVO Studio ideal for enterprises that are producing multiple events (on-prem or remotely) without sacrificing quality of the live event production.

"Corporate and enterprise customers are looking for the same production values you'd expect from a national broadcast—without needing a massive crew or complex infrastructure," said Mo Goyal, Sr. Director Business Development – Live Media Solutions, at EvertzAV. "With BRAVO Studio and Studer, we're giving organizations the ability to produce polished, engaging live events with tools that are intuitive, scalable, and designed for modern hybrid production workflows."

For audio mixing, BRAVO Studio integrates with Studer Vista digital mixing consoles, offering full-featured audio capabilities either through multi-fader mixing consoles or Evertz VUE for remote control. At ISE 2026, visitors to the EvertzAV stand will receive hands-on demonstrations of Vista BRAVO, a 12-fader all-in-one mixing console and the revolutionary

Vista in VUE for remote operations. The EvertzAV Studer portfolio is ideal for all types of applications from live corporate events to podcasts.

EvertzAV experts will be on hand at Booth 4H500 to demonstrate the DreamCatcher™ BRAVO Studio suite and Studer Vista, answer technical questions, and discuss how these solutions can elevate corporate live productions. To book an appointment with the team, please email avsales@evertz.com
