

**FOR IMMEDIATE RELEASE**

## **NUCLEUS Session Manager Adds Native Elgato Stream Deck Support**

Burlington, Canada, June 16, 2026: EvertzAV, a division of Evertz Microsystems Ltd. and a global leader in professional AV-over-IP solutions, today announced native Elgato Stream Deck integration for NUCLEUS Session Manager, expanding control options for AV-over-IP deployments.

Introduced at InfoComm 2026, the new capability enables organizations to incorporate commercially available Elgato Stream Deck hardware alongside NUCLEUS's existing touch-panel and web-client control interfaces. The integration is delivered through the NUCLEUS Control Panel module, providing users with additional flexibility when designing and deploying control solutions for AV-over-IP environments.

NUCLEUS Control Panel provides a zero-programming framework for creating branded support and control panels. By leveraging native Stream Deck integration, administrators can design, deploy and manage user control interfaces directly within NUCLEUS without relying on costly third-party programming services.

The addition of Stream Deck support further extends the flexibility of the NUCLEUS platform while maintaining its simplified approach to configuration, orchestration and control. Organizations can now leverage off-the-shelf hardware panels alongside existing NUCLEUS control interfaces to efficiently manage AV-over-IP distribution networks.

"Organizations continue to look for control solutions that are flexible, intuitive and easy to deploy," said Amandeep Grewal, Senior Manager of AV Solutions at EvertzAV. "By adding native Elgato Stream Deck integration to NUCLEUS Control Panel, we are providing customers with another powerful option for creating user control interfaces without the complexity of custom programming."
